```csharp
namespace PractikProgram
{
    public partial class Form1 : Form
    {
        public int Asif;
        public Form1()
        {
            InitializeComponent();
            textBox1.Text = "1";

        }

        private void Form1_Load(object sender, EventArgs e)
        {

        }

        private void button1_Click(object sender, EventArgs e)
        {
            Asif = Convert.ToInt32(textBox1.Text);
            if (textBox1.Text != String.Empty)
            {
                textBox1.Text = (Int32.Parse(textBox1.Text) + Asif).ToString();
                if(Int32.Parse(textBox1.Text) == 10)
                {
                    int Asif = 10;

                }
            }

        }

        private void textBox1_TextChanged(object sender, EventArgs e)
        {

        }
    }
}
```
